

Tiree Time

sometimes it seems Tiree time is half an hour behind the clock – it is !

time is where the sun is

The sun rises and sets because the earth is turning.
The further west you travel, the later the sun rises.

At 12 o'clock the sun is at its highest in London

But it is 27 minutes and 30 seconds later before the sun is highest in Tiree

then it was standardised

It wasn't always like this once every clock tower showed it's own time. 12 o'clock was when the sun was high.

Then the railways came and wanted the same time ... everywhere

let's reclaim our own time!

Tiree Time shows sun time here now
